

Master of Science in Information Technology in Education

The Faculty of Computing and Technology has partnered with experts in education to create a unique Master's degree for teachers who want to be able to develop and deliver engaging, technology-rich learning activities. Special emphasis will be given to education in the post Covid-19 era. The MSc In IT In Education degree programme combines the very best of general IT with specialist knowledge of IT-enabled education technologies.

The programme is conducted by a panel of experts drawn from academia, industry, and the public sector. The program aims to integrate best practices into teaching educational psychology, teaching and learning pedagogy including blended learning and microlearning, classroom management, and the effective use of IT for education. This postgraduate qualification is designed to produce educationalists who are able to utilize IT tools for evolving spheres of modern education, such as blended-learning, student centred education, and e-learning.

Salient Features of the Programme

- Recognized MSc (SLQF Level 10) from a leading National University
- Can be used for the career progress of government teachers
